Decanter-Type Coffee Brewer

Bloomfield Industries: Models 8718, 8738, 8783MCD & 8783UK

Pictures and Additional Information: Corresponding chapter of Equipment Manual

When
Weekly

Tools
Digital Thermometer with Needle Probe
Empty Decanter
Brew Funnel

Precautions:

CAUTION: Brewing and serving temperatures of coffee is EXTREMELY HOT. Hot coffee can cause serious skin burns. Use protective gloves. Allow equipment to cool. Always dry hands before handling electrical parts.

Decanter Brewers

1. Remove sprayhead and gasket. Place an empty decanter in the normal position under the brew head. Carefully balance an empty brew funnel on the decanter, so that the sprayhead area is accessible.

CAUTION: Water from the brew head is extremely hot. Hot water can cause serious burns.

2. Wait until the brew light is ON. Press the brew switch and carefully check the temperature of the water ½" (13mm) from the bottom of the brew funnel with the needle probe. Temperature reading should be 185ºF to 195ºF (85ºC to 91ºC).

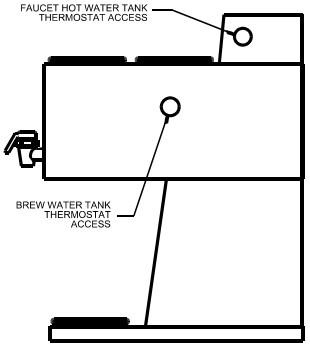
CAUTION: To avoid contact with the hot water, hold the needle probe at a downward angle to the brew funnel. Hot water can cause serious burns.

3. **CALIBRATION:**
NOTE: Bloomfield brewers do not normally require calibration if delimed on a regular basis. Lime build-up on the thermostat sensing bulb can cause the calibration to change. Deliming must be performed by an Authorized Bloomfield Service Agency

DANGER: Disconnect the coffee brewer from electrical supply before attempting calibration. Electric shock can cause serious injury or death.

FOR BREWERS 8783MCD & 8783UK:

a. Remove center hole plug to access brew water tank thermostat.
b. Turn the control thermostat knob CLOCKWISE to INCREASE the brew water temperature, or COUNTER-CLOCKWISE to DECREASE temperature.
IMPORTANT: 1/8 turn of the control thermostat knob will change the brew water temperature approximately 10ºF (5.5ºC).). NEVER turn the control more than one full turn in either direction.
c. Reinstall sprayhead, gasket and plug.



OTHER BREWERS:

a. If temperature reading is not 185ºF to 195ºF (85ºC to 91ºC), contact an Authorized Bloomfield Service Agency for adjustment and/or repairs.
b. Reinstall sprayhead and gasket.

Procedure is complete.
